Activity Keypoints

- plan – build up a routine that is pointed towards longer term and establishment of habit
 - You can do extra if desired, no problem (e.g. 6 days per week)
 - Typical high-endurance routine is 4-5 days/wk
- target - 300 minutes over 4 days/wk
- The average healthy weight loss pace is 1 lbs/month
 - Your plan calls for at least one year
- Gain muscle first, don't emphasize weight loss until after
 - "Convert your weight, it's not a Lose/Grow game you see"
 - This minimizes number of cycles and time taken dramatically
 - There will be several rounds to final achieved goals
- Diet and diet-balance are one of the most important long term components of your plan.
 - A primary goal is healthy lifestyle balance, ensure you target something that you can maintain

Note:

Consider supplementing your diet with a Probiotic and an Amino Acid

Supplemental Nutrients Plan

Protein (after workout) – 1 Scoops w/Almond Milk

Aminos (after workout) – 1 Scoop

Vega One (lunch replace) – 2 Scoops w/Almond Milk

Water (daily) – 70 oz.

Central Lift Style Points

- Always squeeze the shit on grips **during** a lift. Grip strength & muscle activation bloom here!
- Always squeeze on **entry** into a lift and on **exit**. Muscle engagement and activation grow here
- Rotate on entry and on exit from standing curls

Key

- **Drop-Set:** When you are done with your last set, immediately grab weights that are 5lbs. lighter (if using dumbbells) or drop the weight one plate (if using a machine or cables) and do as many reps as you can, when you no longer can perform the exercise without maintaining form, drop the weight an additional 5lbs./1 plate, and repeat the reps to failure
- **Failure:** performing an exercise to complete exhaustion, while maintaining perfect form. When your form breaks, you have failed.
